

Sovereign Data,
Sovereign AI,
Value-Based AI Programming
and the Relationship to
Catholic Social Teaching

Introducing the Sovereign Data Approach

Provides fundamental control by user of their data and show they share data with in a social trust network platform concept and design

Sovereign Data Definition

01

Empowers individuals and entities with full rights over their data including access, control, sharing, and monetization.

Maintains Ownership

02

Returns data ownership and value generation back to the original data creators, reversing traditional models.

Control as Foundational

03

Control is essential for meaningful valuation and monetization of data assets, enabling value extraction.

Strategic Benefit

04

Maximizing data value requires sovereignty. Without sovereign control, value extraction is impossible.

Core Characteristics of Sovereign AI

Acts as the user's AI agent mirroring behaviors and

Sovereign AI is programmed to replicate the user's specific behaviors and preferences, ensuring personalized interactions and responses that feel natural and intuitive to the

Operates based on user values and ethics

It incorporates the user's values and ethical frameworks into its functioning, aligning AI decisions with what the user considers morally and socially acceptable.

Enables direct user control over decisions and operations

Users maintain direct authority over how the AI makes decisions and carries out tasks, allowing transparency and trust in AI-driven

Supports autonomous coordination and learning aligned with human priorities

While the AI learns and operates autonomously, it continuously aligns its actions with human goals and priorities, ensuring beneficial and safe AI behavior.

What is Value-Based AI Programming

- AI programming incorporating values from quality data, such as religions and social and psychological value principals.
- AI programming which provides the user to have AI decisions aligned with the user's own values.

Why Sovereign AI is Value-Based

Explaining how Sovereign AI aligns technology with individual human values and control

Mimics the human user as a digital twin

Sovereign AI is designed to replicate the human user digitally, ensuring it aligns closely with their personal values and behaviors for better customization and trust.

Incorporates user's values into programming

The AI directly integrates the individual's values into its core programming, making decisions that reflect personal ethics and

Operates under the user's design and

Sovereign AI follows the commands and controls set by its human user(s), ensuring that autonomy remains with the person rather than a third party AI agent.

Enhances human capability

Sovereign AI supports humans in their activities by assisting with repetitive tasks and in trusted decision-making, offer suggestions, summaries, or alerts in trust.

DESIGNING AI FOR HUMAN VALUES AND THE CONNECTION TO CATHOLIC SOCIAL TEACHING

VALUES IN AI PROGRAMMING HAS ITS ROOTS IN AI ETHICS AND AI SAFETY WITH LIMITED VALUE-BASED

AI ethics began in science fiction writing portraying the risks of robots not aligned with human goals or becoming independent of human controls and shifted to AI Safety, Ethical AI and Responsible AI principles in the 2000s.

- Asimov's Three Laws
- 1942: Asimov's Three Laws in "Runaround" with exact three clauses as stated in the source.

1942

2000–2025

- Science fiction origins
- Science fiction origins highlighting robot risks and misalignment with human goals.

- 2000–2012: Founding of AI Safety Institutes giving birth to AI Safety, mainly from concerns that AI would create transhumans
- 2017: AI Safety and Ethical AI development progressed the establishment of 23 guidelines at the Beneficial AI 2017 conference by a group of technologists

VALUES IN AI PROGRAMMING HAS ITS ROOTS IN AI ETHICS AND AI SAFETY WITH LIMITED VALUE-BASED

- AI ethics began in science fiction writing portraying the risks of robots not aligned with human goals or becoming independent of human controls.

- AI Safety and Ethical AI development progressed the establishment of 23 guidelines at the Beneficial AI 2017 conference by a group of technologists

2017

2023–2024

- In 2023, AI Safety became mainstream with concerns identified by technologists from issues with advancing Large Language Models and regulators around the world beginning to implement AI governance regulations.
- Discussion of Value-Based AI programming began in 2024 at the World Economic Forum as “AI alignment” to design AI systems that behave “consistent” with human values and ethical principles

IMPLEMENTING **VALUES** INTO AI PROGRAMMING CODE

Practical steps to embed user-selected values and digital sovereignty

DESIGN PHASE: REQUIRES SELECTING VALUES TO GUIDE PROGRAMMING DEVELOPMENT.

Define core values early to shape architecture and decisions.

AI DATA: QUALITY DATA FOR VALUES IS CRITICAL; DATA QUALITY ON VALUES TO BE USED FOR AI PROGRAMMING IS ESSENTIAL.

Ensure datasets reflect chosen values and high quality standards.

USER VALUE SELECTION: USERS NEED TO BE ABLE TO SELECT THEIR VALUE-BASED FUNDAMENTALS FROM QUALITY DATA WITH RELIGIOSITY FROM FAITH AS INTEGRAL

Provide interfaces for users to choose value priorities, including faith.

DIGITAL SOVEREIGNTY IMPLEMENTATION: DIGITAL SOVEREIGNTY ALLOWS THE USER TO IMPORT, MANAGE, EXPORT AND SHARE DATA IN A TRUSTED SOCIAL NETWORK.

Enable user control over their data lifecycle and sharing settings.

SOVEREIGN AI IMPLEMENTATION: USER SELECTS THE VALUES AND CONTROLS THE DESIGN, OPERATIONS, AND USE OF THE

Keep humans in control of value choices and operational governance.

HOW CATHOLIC SOCIAL TEACHING CAN GUIDE AI PROGRAMMING

Applying 2,000 years of values to ensure dignity, truth, and the common good

Catholic Social Teaching provides high quality data for value-based AI programming.

At its core, Catholic Social Teaching are fundamental values on inherent dignity for humans and principle to will help ensure AI systems treat users with respect for their human rights.

Catholic Social Teaching provides a strong moral framework that can shape AI behavior and actions and promote the common good to guide AI to prioritize societal well-being.

Catholic Social Teaching recognizes the human as more than data, informing AI programming to focus on the human, including commitment to peace and an emphasis on truth for data authenticity and use.

Catholic Social Teaching is based on 2,000 years of values, morals and principles offering rich, high quality data.

CATHOLIC SOCIAL TEACHING AT THE CORE OF DATA SOVEREIGNTY, SOVEREIGN AI, AND VALUE-BASED AI

Guiding values through Catholic Social Teaching

01 FOCUS ON THE HUMAN USER AND THEIR FREEDOM TO MAKE THEIR OWN DECISIONS WITH THEIR OWN DATA.

Emphasizes individual autonomy and data rights.

02 DATA AND USER CONNECTIONS IN A TRUSTED SOCIAL NETWORK LEADING TO AUTHENTICITY AND PERSONAL DECISION MAKING IN THE VIRTUAL WORLD.

Trusted networks foster authentic choices online.

03 PATHWAY TO CONTROL AND MONETIZE PERSONAL DATA AS “DATA BASED INCOME” RATHER THAN DEPENDENCE ON TECH TITANS, PROVIDING ECONOMIC FREEDOM.

Personal data becomes a source of income and independence.

04 INCREASED CONNECTIONS WITHIN A TRUSTED SOCIAL NETWORK TO OTHERS IN THE CATHOLIC FAITH AND CHURCH.

Strengthens faith-based community ties online.

05 INCREASED VISIBILITY TO THE VALUES AND PRINCIPLES WHICH MAKE UP CATHOLIC SOCIAL TEACHING.

Makes CST principles more visible and actionable.
